CADDRA 2026: Presenter Guidelines for Disclosing Use of Artificial Intelligence (AI)

Thank you for being part of this year's ADHD Research Day or CADDRA Conference.
When preparing your presentation(s), in line with current best practice, please disclose artificial intelligence (AI) use for content creation. If unsure whether your AI use requires disclosure, review the following table:

Requires Disclosure	Does not Require Disclosure
Using AI to create visual, audio, or text content, including tables, figures, and images	Using AI for spelling and grammar checks
Generating references or citations	Formatting references or sections for a specific referencing style (Ex. APA 7th edition)
Creating clinical guidelines or case study examples	Formatting your slide or poster presentation according to CADDRA specifications
Analyzing/coding survey or audience data	Brainstorming initial ideas or concepts
Using AI to make diagnostic or clinical recommendations in your presentation	Condensing or re-wording information

How to disclose AI use:
Clearly indicate your use of AI for content generation. Provide details on what sections AI was used for and where this content appears in your presentation.

Example of AI disclosure:
Artificial intelligence was used to:

- *Generate audience questions*
- *Search for and produce relevant references*
- *Create images on slides 2-6*

Providing an accuracy statement:
Please describe how AI generated content was checked for accuracy and authenticity (e.g., manually review original source, expert/peer review).

Example of AI accuracy statement:
AI-generated references were verified for authenticity and relevant content via PubMed.
